

EIK Amphibious in Turkey

EIK Cat323 amphibious excavator was delivered to Turkey last month carrying out maintenance work

on the river bed, swamps, lakes, ponds and reservoir. The current ongoing project is to remove muds and sediments deposited at the river bank. It was an exciting yet memorable moment to have the government officials witnessing the long reach amphibious excavator, complete with supplementary

pontoon & spud, carrying out the work effectively. Our satisfaction comes from the approving smile of the customer. All previous solutions have failed to live up to expectation, we are glad that their search for right solutions is finally over. [Click here to watch the video.](#)

Giving Back to the Community

EIK has organized a trip to the Handicapped & Disabled Association & Damo Orphanage Centre in Kluang. Our company is appealing to socially conscious citizens by encouraging EIK staff to actively giving back to needy communities. It is heart warming to witness these simple acts are able to change the lives of people. Join us to make an impact and create a more graceful society.

Born of A Giant

30m Long Reach for Hitachi EX1900

Two months in the making, this is all it takes to complete the 30m long reach boom for EX1900. Surprise to many but not for us. We have built many long reach boom of this size and scale. With the cumulative experience and high tech equipment in our facilities, we have what it takes to design, build and deliver!

Not easy to visualize the size of the boom, it is around 21 adults loosely lining up, while the stick is made of a queue of 15 adults. If you are keen for more photos, rest assured that we will definitely come back with more photos once our customer has transported the huge machine to the project site.

Stay tuned!
