Hitachi and Caterpillar Swamp Excavator

Fear no terrain, trump in swamp

In most occasions, it is indeed not easy for potential customers to visualize or imagine how amphibious excavators can help them to accomplish a job that seemingly impossible to execute, and therefore creating challenges in justifying the investment.

For experience users, the use of such equipment is a no brainer, period! The investment is an easy justification as the job can be carried out without the needs of additional equipment and yet able to complete the challenging task on time.

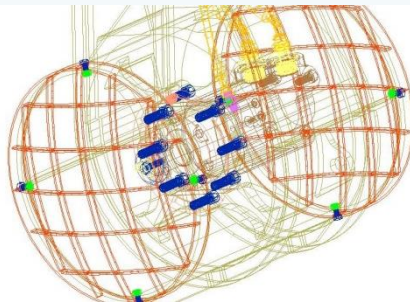

The cost saving of being on time need no further elaboration. From these few pictures, one can easily see a total transformation from a swamp land to a brand new landscape. I dare to bet you

If we have not superimposed the before and after photos, you would not be able to recognize it.

This is just one of the numerous application of amphibious or swamp excavator. For more application photos, feel free to visit our [photo gallery](#) page.

There is an exciting new feature being implemented in one of our product line. It is going to unleash more potentials and open up new possibilities in the field of applications. Final phase of testing is going to commence soon. Do stay tune. Here is a teaser.

Product Teaser

Unleashing new possibilities

In the last issue we featured a long boom of a large excavator we have delivered to a happy customer. We are pleasantly surprised with the response from our customers wanting to know more what other very large boom we have designed and built. These are just a few sample photos, we have more.

Komatsu PC1600

Liebherr 994
