

WODCON 2016

Thanks to everyone for coming over to our booth during the WODCON 2016. It was an excellent platform for us to showcase our products and technologies which are highly relevant to the dredging industry.

The center of attention is our patented 'multi-synchronous direct drive' system. A refreshing approach in the amphibious undercarriage design that garnered so much interest during the conference.

We spoke to an experienced amphibious excavator user who has seen our machine performing alongside with competitors', this was his EXACT phrase. *"This machine is an absolute animal!"*

New Machine Delivery

Another new machine delivered to Africa and working hard on the job. Our service team assembled and commissioned the machine, came home and immediately heading to another part of the world for similar task.

Our service team travels practically to all continents except for the Antarctica. We don't see their schedule is slowing down any time soon.

Field Proven Polymer Track Shoe

We have been relentlessly pursuing better materials to improve our product quality. The polymer material use for the track shoes is one of the significant improvement made through selection of material, and our confidence is backed by extensive field test data.

We put machines with polymer track shoes on a long term field testing program at different geographical regions and seasons including harsh winter. Customers have been pleased with the results, which matters the most.

The picture on the right is the condition of the polymer track shoes working in the field for more than 5000 hours. No replacement is required.

In the long term, the total cost of ownership is low. The best value proposition for customers.

WE BUILD WITH PRIDE, YOU USE WITH TRUST.
